

About Dispatch

If your business performs regular delivery rounds then it will benefit from Dispatch. Dispatch was designed to specifically meet the needs of importers, wholesalers, distributors, and manufacturers using MYOB Exonet who need to make regular delivery runs. Simplicity of design, use, and configuration ensures you can be up and running within minutes.

Growing Pains

Australia is experiencing a boom period unlike anything before. Businesses are scrambling to catch the wave but staff shortages are challenging their growth. And the staff they *can* find are often expensive and pick and choose jobs according to their desired lifestyle.

Many businesses see improved workflow through software systems as a way of improving **productivity**, **quality** and **reliability**, **reducing costs**, **faster job turnaround time**, and **eliminating** drudgery.

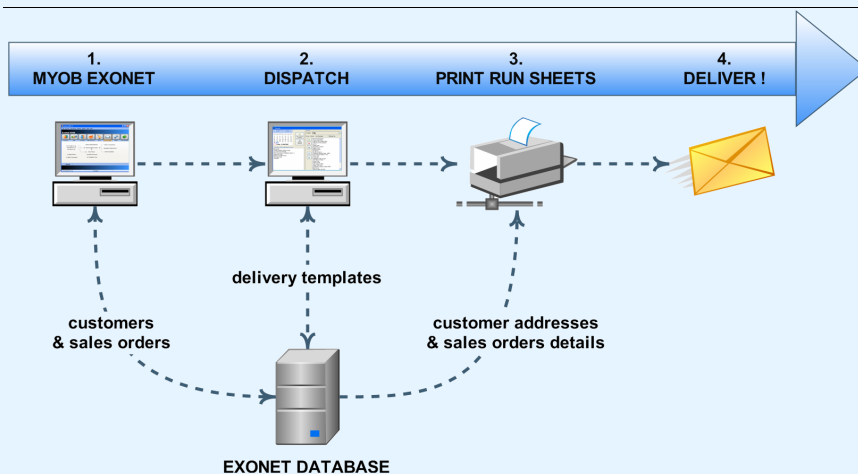

Room for Improvement

One common challenge that importers, wholesalers, distributors, and manufacturers all face is managing their delivery systems. It can be a struggle to manage all the customers, invoices, addresses, drivers, invoices, and sales orders!

Delivery Run: City		Thursday, 2 August 2007		Driver: Joe Guiseppe		Vehicle: Blazing Fury	
Deliv Order	Time Preference	Customer	Invoice #	Comments	Paid \$\$	Signature	
0		Ba Ba Black	1061				
1		Emporio Bar & Cafe	1082				
2		Caffissimo on the Terrace	1097				
3		Caffissimo at Australia Place	1083				

Are you spending *too much time* sorting invoices and creating run sheets for your drivers?

The Solution - Dispatch

Dispatch is an EXONET add-on for managing delivery rounds that is **fast** and **easy** to use.

Reads and writes **live** to the EXONET database to save any changes **instantly**.

Stores all data in the EXONET database to keep backup procedures **simple**.

Gives **you** control over which invoices to deliver, in which order, in which vehicle.

Runs as a separate Windows application which allows **unlimited** users.

Automatically print in order all your production sheets, delivery sheets, and invoices using templates or custom ordering.

Extremely simple and powerful; **easy** to understand and **quick** to respond!

Doesn't interfere with normal EXONET use, so there are **no disruptions** to your operations.

Create an unlimited number of custom run templates, with customer lists, drivers and vehicles assigned to each.
